

Environmental and Occupational Health Certificate

Mission Statement

This certificate is designed to prepare those working in public health, health care, and environmental sectors to deal with the plethora of environmental issues that impact human health.

Student Learning Outcomes

UWF Environmental and Occupational Health Certificate graduates should be able to do the following:

- Explain genetic, physiologic and psychosocial factors that affect susceptibility to adverse health outcomes following exposure to environmental hazards.
- Identify and describe the elements of occupational safety and health programs.
- Identify environmental hazards and describe how major environmental and occupational agents directly or indirectly affect human health, safety, and the environment
- Evaluate a case study of a local environmental issue or historic bioterrorist attack using professional writing and communications skills.
- Communicate audience-appropriate public health content, both in writing and through oral presentation
- Evaluate the process for resolving occupational safety and health issues using appropriate laws and regulations.
- Design programs to improve health and safety using professional writing and communications skills.
