Technology Systems Support

Student Learning Outcomes

Upon completion of the undergraduate certificate in Technology Systems Support, the graduate will be able to do the following:

1. Describe and demonstrate attainment of the foundational knowledge and skills needed to become an effective Technology Systems professional
2. Develop plans to effectively manage the operations of a networked technology system in organizations of varying sizes.
3. Design, develop, and evaluate information-based solutions that meet the needs of stakeholders with real-world communication problems.
4. Design a distributed learning system that uses emerging technologies to support distance delivery.
