Before you get started, make sure:

- Your computer has a wireless card
- You are running Ubuntu 12.10
  (Other Linux distributions should connect in the same way, only the menus may be different)
- You are disconnected from any Wi-Fi networks

1. First, click the network icon, then select “uwf-argo-air” from the list
2. Next, configure the wireless settings to be the same as shown below, but with your UWF username and password in the “Username:” and “Password:” fields.

![Wireless Network Authentication](image.png)

4. Click the “Connect” button in the bottom right corner and wait up to a minute for your computer to connect to uwf-argo-air.
5. You should get a “Connection Established” message

6. You should now be connected to the Internet!

*Please note that the University of West Florida does not provide official support for Linux at this time. This guide is provided to students for their own benefit.
