

INSTRUCTIONAL TECHNOLOGY, M.Ed.

Mission Statement

Instructional Design and Technology professionals provide critical assistance for national and international education and training initiatives. The M.Ed. in Instructional Design and Technology prepares education, training, military, healthcare, and business and industry professionals to solve complex organizational problems through the application of education, training and/or technology based solutions.

Student Learning Outcomes

Students graduating from this program should be able to do the following:

Content

- Apply Instructional Technology concepts and Instructional Design models and processes to work environments in a variety of settings
- Design, develop, implement, and formatively evaluate instructional solutions that help to resolve individual and organizational performance problems

Critical Thinking

- Analyze individual and organizational performance problems
- Generate comprehensive solutions to support the strategic objectives of an organization

Communication

- Communicate effectively with culturally diverse stakeholders using appropriate modalities

Integrity/Values

- Apply appropriate code of ethics to professional interactions

Assessment of Student Learning Outcomes

All students participate in a capstone experience that helps them synthesize the program learning outcomes to showcase their acquisition of program content. Students plan their capstone experience, with advice, support and direction from the capstone experience instructor. In the capstone experience, students identify a client for whom they will complete a project, prepare a proposal for the project, and complete the project articulated in the proposal. The capstone instructor reviews and approves all components of the capstone experience and the project.
