

Health Psychology Certificate

Student Learning Outcomes

Upon completion of the undergraduate certificate in Health Psychology Certificate, the graduate will be able to do the following:

- 1) Identify and describe biopsychosocial factors that contribute to the promotion and maintenance of health and illness.
- 2) Describe and discuss the interactive role of biological, cognitive, affective, behavioral, and social influences on human health and illness.
- 3) Analyze and explain contemporary health psychology theories, research, and applications related to health promotion, disease prevention, and the treatment and management of illness.
- 4) Evaluate and apply theoretical constructs and empirical evidence from the field of psychology to address problems of health promotion, disease prevention, and the treatment and management of illness.
- 5) Compare and contrast contemporary health psychology understandings of the promotion and maintenance of health and illness with other health-related disciplines.
