

Public Health Certificate in Emergency Management and Infection Control

Student Learning Outcomes: Upon completion of the Public Health Certificate in Emergency Management and Infection Control, the graduate will be able to do the following:

1. Retrieve and analyze public health surveillance data used in the United States and globally.
2. Develop and implement culturally appropriate approaches for assessing, preventing and controlling environmental hazards/disasters that pose risks to human health and safety in the community setting.
3. Develop, implement and evaluate infection programs for, preventing and controlling environmental hazards/disasters that pose risks to human health.
4. Communicate audience-appropriate public health content, both in writing and through oral presentation, including risk communication when dealing with emergencies from biological, chemical and/or physical agents that affect human health in diverse populations.
