

Short-Course in Submerged Paleolandscapes

at the University of West Florida

The **UWF Division of Anthropology and Archaeology** is offering a short course on submerged paleolandscapes in Pensacola, Florida. Open to both current students and professionals, this course will include lectures from scholars and professionals, practical exercises, and hands-on experiences with real data and core samples.

Topics will include:

- Sea-level change: what it means to archaeology and how to understand it
- Climate changes and their impacts on the archaeological record
- Determining submerged site potential
- Remote sensing methods and interpretation
- Physical sampling and coring methods and analyses
- Excavation and documentation of submerged prehistoric archaeological sites

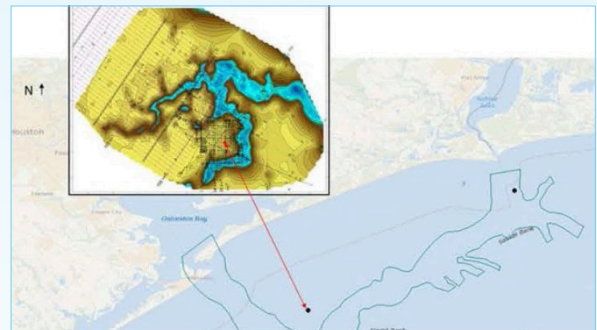

AUGUST 3-7, 2020
