LiveScribe Smartpen

The LiveScribe Smartpen is a ballpoint pen with an embedded computer and digital audio recorder. When used with LiveScribe digital paper, it records what it writes for later uploading to a computer, and synchronizes those notes with any audio it has recorded. This allows users to replay portions of a recording by tapping on the notes they were taking at the time the recording was made. It is also possible to select which portion of a recording to replay by clicking on the relevant portion of a page on-screen, once it has been synched to the Livescribe Desktop software.

Size: The LiveScribe smart pen is about the size and weight of a large pen (5/8” x 6 1/8”), and is equipped with a removable ball-point ink cartridge, a microphone to record audio, a speaker for playback, a small OLED display, and internal flash memory that captures handwritten notes, audio and drawings.

Options: The user can choose to record audio in addition to the handwritten text. Recorded audio is kept indexed with the handwritten text-tapping on a written word starts playback of the recorded audio from that part of the recording.

Storage: The LiveScribe is available in 2 or 4 GB which allows students to have plenty of room for storing notes

Software: LiveScribe comes with software that you use to download and store your notes on your computer, which allows you to go back over notes you’ve already taken.

Variety of Devices: The notes can be transferred to a variety of devices including Apple, iPad, iPhone and Google Docs
