Dragon Naturally Speaking

Dragon Naturally Speaking is a speech to text program for students who need assistance with typing papers or completing work for class. It is helpful for students who have limited physical mobility, students who have Dyslexia or a learning disability, and students who are slower at typing or processing. The goal is to make it easier to interact with a computer without manually using a keyboard or a mouse.

**Power of speech:** By using speech you can create, format, and edit documents as well as to launch and control most of your desktop applications

**Powerful productivity:** You are able to accomplish a lot using dragon, while getting things done in a timely manner, such as papers, writing emails, and all while using no keyboard or mouse

**Speech output capabilities:** Students can have text read aloud to them. The system also works with most popular screen readers, helping visually impaired students to work more efficiently.
